Product Requirements Document (PRD): AbilityHub & TalentConnect Platform

1. Project Overview

Name: Talanta Hub & TalentConnect **Purpose:** A digital platform designed to empower Persons with Disabilities (PWDs) in the creative and hospitality sectors. It connects skilled PWD talents (musicians, artists, speakers, chefs) with inclusive, accessible partner venues (hotels, resorts) for event bookings, and provides an e-commerce marketplace for artisanal crafts. **Target Audience:**

1. PWD Creators, Artists, and Skilled Professionals.
2. Partner Hotels and Event Venues.
3. Event Organizers and the General Public (Buyers/Bookers).

2. Core Functional Requirements

A. Accessibility System (Crucial)

Given the target audience, the platform must exceed standard WCAG compliance.

- **Dynamic Text Scaling:** UI controls to increase or decrease base font size without breaking the layout.
- **High-Contrast Mode:** A toggle that switches the UI to strict black backgrounds with high-visibility text (e.g., yellow/white) and prominent borders.
- **Voice/Audio Assist:** Built-in screen reader capabilities or text-to-speech toggles for users with visual impairments.
- **Large Touch Targets:** Minimum 48x48px clickable areas for users with motor difficulties.

B. Talent Showcase & Directory

- **Talent Profiles:** Must display Name, Skill Category, Specific Title, Disability Tag, Rating, Location, Booking Fee, Biography, and specific Stage/Accessibility Needs.(put African images with their actual Disabilitiy, and after their name add and others, to only show that there's one person with that one disability but there are others to).
- **Search & Filter:** Users must be able to search by name/skill and filter by category (Music, Fine Arts, Public Speaking, Crafts, Culinary).
- **Booking Trigger:** A direct call-to-action to book the talent for an event.

C. Accessible Venue Directory

- **Venue Profiles:** Display Hotel Name, Location, Description, and Verified Accessibility Infrastructure.
- **Accessibility Filters:** Users must be able to filter venues by specific features like "Wheelchair Ramp Access," "Braille Signage," "Sign Language Trained Staff," and "Accessible

Stages."

D. Hotel Marketplace (E-Commerce)

- **Product Listings:** Display artisanal products or event tickets with Title, Artisan Name, Hotel Partner Location, Price, and Image.
- **Shopping Cart:** Users can add/remove items, view the total cost, and proceed to checkout.

E. Booking & Scheduling Engine

- **Booking Form:** When booking a talent, the user must specify:
  - The selected Partner Hotel/Venue.
  - Event Date.
  - Time Slot (Morning, Afternoon, Evening).
  - Specific Accessibility/Stage Setup Notes.
- **Dynamic Pricing:** Display the total booking fee based on the talent's base rate.

F. Payment Integration (M-Pesa)

- **Mobile Money Checkout:** Seamless integration with local payment gateways (specifically Safaricom M-Pesa).
- **STK Push Simulation/Integration:** A prompt asking for the user's mobile number, followed by an STK push (PIN prompt) to their phone.
- **Digital Receipts:** Auto-generation of receipt numbers, timestamps, and payment status upon successful transaction.

G. User Dashboard (My Bookings)

- **Transaction History:** A unified view showing all confirmed talent bookings and marketplace purchases.
- **Status Tracking:** Clear indicators of payment status and event confirmation.

H. Registration & Onboarding

- **Dual Onboarding:** A registration form that allows users to sign up either as a "Talent" or a "Partner Hotel."
- **Specialized Fields:** If registering as a talent, the form must capture their skill category and specific accessibility needs.

3. Non-Functional Requirements

A. Performance & Responsiveness

- **Mobile-First Design:** The platform must be fully responsive, scaling perfectly from mobile devices up to large desktop monitors.
- **Fast Loading:** Optimized images and minimal blocking scripts to ensure the site loads quickly on slower mobile networks.

B. Technology Stack Recommendations (For Scratch Build)

- **Frontend:** HTML5, Tailwind CSS (for rapid, responsive UI), JavaScript (vanilla or frameworks like React/Vue.js). FontAwesome for scalable iconography.
- **Backend (Future-proofing):** Node.js/Express, Python/Django, or PHP/Laravel to handle the database and API endpoints.
- **Database:** PostgreSQL or MongoDB to store user profiles, bookings, and product catalogs.
- **Payment API:** Daraja API (Safaricom M-Pesa) for processing payments.

C. Security

- Secure handling of user data and phone numbers.
- Data validation on all booking and registration forms to prevent injection attacks.
